DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3/19/2009 has been entered.

Information Disclosure Statement

The information disclosure statement (IDS) submitted on 3/19/2009 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement has been considered by the examiner.

Interview Summary

The Examiner notes that the Interview Summary entered 2/11/2009 corresponds to continuation case 10/969,306, where claim 1 was restricted by original presentation.

Art Unit: 2421

Terminal Disclaimer

Applicant states that a terminal disclaimer has been submitted, however, no such submission has been found. Therefore, the Double Patenting rejection stands.

Response to Arguments

Applicant's arguments filed 3/19/2009 have been fully considered but they are not persuasive.

Applicant's have amended the independent claims to recite, "wherein the viewer-defined preference is a specified value assigned to the viewer-defined events that occur within the two or more electronic presentations, that indicates a priority of the viewer-defined event to the viewer, wherein the specified value is utilized to rank multiple viewer-defined preferences".

The Examiner notes that the claims still read on the prior art Menard reference of record (see updated rejection below).

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140

Application/Control Number: 09/465,529

Art Unit: 2421

F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-3, 5, 8-13, 15, 18-19, 25-37 and 39-43 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-3, 5, 11-13, 15, 20-23, 25-27, 29 and 32-35 of copending Application No. 10/969,306. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims in the instant application are broader than the claims in copending Application No. 10/969,306 which claims a system that performs the viewing management method claimed in the instant application.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Referring to claims 1-3, 5 and 8-10 of the instant application, see claims 1-3, 5 and 8-10 of the '306 application.

Referring to claims 11-13, 15 and 18-19 of the instant application, see claims 11-13, 15 and 18-19 of the '306 application.

Referring to claims 25-28 and 31 of the instant application, see claims 25-31 of the '306 application.

Claims 1-3, 5, 8-13, 15, 18-19, 25-37 and 39-43 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-3, 5, 7-10, 12 and 15-19 of copending Application No. 10/969,302. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims in the instant application are broader than the claims in copending Application No. 10/969,302 which claims a computer readable media that executes the viewing management method claimed in the instant application.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Referring to claims 1-3, 5 and 8-10 of the instant application, see claims 1-3, 5 and 7 of the '302 application.

Referring to claims 11-13, 15 and 18-19 of the instant application, see claims 8-12 and 7 of the '302 application.

Referring to claims 25-28 and 31-33 of the instant application, see claims 15-19 of the '302 application.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-3, 5, 9-13, 15, 19, 25-27, 29-37 and 39-42 are rejected under 35

U.S.C. 102(e) as being clearly anticipated by Menard et al. (U.S. Patent No. 6,810,526).

Referring to claim 1, Menard discloses a system (see Figure 1).

Menard also discloses means for simultaneously monitoring two or more electronic presentations that are concurrently broadcast (see Column 3, Lines 5-9 for simultaneously monitoring each channel by the use of separate servers 8 in Figure 1), wherein said monitoring comprises monitoring data that does not comprise content that can be presented to a viewer (see Column 2, Line 60 through Column 3, Line 4 and Column 4, Lines 12-16 and Column 4, Lines 47-57 for the monitoring comprising the use of time-tagged text streams, which are only used by the servers 4 and 8 and are not displayed to the user).

Menard also discloses means for automatically switching between displays of the two or more electronic presentations based upon viewer-defined parameters (see Column 3, Lines 33-39 for causing PC 7 or a television set to change channels based upon an alert signal sent to the user, where the alert signal is triggered based on the user's request (or requests) to view television programs with Bill Clinton talking about the Middle East (see Column 3, Lines 33-40)), wherein the viewer-defined parameters comprise:

Application/Control Number: 09/465,529

Art Unit: 2421

a viewer defined event, wherein the viewer defined event occurs within a specified presentation and the viewer defined event describes an activity or action that takes place within the specified electronic presentation (see Column 3, Lines 20-25 for a preference being the Middle East and Bill Clinton, which defines a viewer defined event that identifies the action of Bill Clinton talking about the Middle East (see Column 3, Lines 20-26)).

Page 7

a viewer defined preference, wherein the viewer defined preference is a specified value assigned to the viewer defined event that occurs within the specified electronic presentation, (see Column 3, Lines 28-32 for the viewer further assigning a value to the search that specifies which channels should be included in the search, for example only search news channels (wherein the terms "news" is the value)) that indicates a priority of the viewerdefined event to the viewer (see again Column 3, Lines 28-32 for the value indicating a priority that the viewer prefers news and stock market channels), wherein the specified value is utilized to rank multiple viewer-defined preferences (see again Column 3, Lines 28-32 for the value being used to locate a clip and send an alert to a viewer that a preferred clip is available, thereby selecting only preferred clips on preferred channels over all available clips on all available channels, thereby ranking multiple viewerdefined preferences by specifying Middle East and Bill Clinton on news and stock market channels).

Referring to claim 2, Menard discloses that the viewer-defined event is defined in terms of specific electronic presentation titles (see again Column 3, Lines 20-25 where the preferences Clinton and Middle East are used to find programs (that contain titles) where Bill Clinton talks about the Middle East, therefore the preferences Clinton and Middle East are defined in terms of specific electronic presentation titles that contain Bill Clinton talking about the Middle East).

Referring to claim 3, Menard discloses that the viewer-defined event is defined in terms of topics that can occur within electronic presentations (see Column 3, Lines 20-25 for a preference being Middle East, which is a topic).

Referring to claim 5, see the rejection of claims 3. Claim 5 further recites that the viewer defined events are defined in terms of events that can occur within the specified electronic presentations. The Examiner notes that rejection of claims 1-3 for teaching that the events occur within a specified electronic presentation.

Referring to claims 9-10, see the rejection of claim 1 and Figures 1-2.

Referring to claims 11-13, 15 and 19, see the rejection of claims 1-3, 5 and 19, respectively. Further note that in regards to claim 11, Menard further discloses automatically notifying a viewer when an electronic presentation satisfies a viewer-

defined parameter (see Column 2, Lines 14-29 for sending an alert when a profile match has occurred).

Referring to claim 25, Menard discloses a viewing management method for managing viewing of multiple live electronic presentations (see the rejection of claim 1).

Menard also discloses means for receiving and sending at least one viewer request from one or more viewers to an encoder (see Column 4, Lines 47-57 for search engine 21 in Figure 2 receiving the viewer request stored in the user profile in memory 20), the viewer request containing one or more viewer-defined parameters are to be used to evaluate a plurality of electronic presentations (see the viewer-defined preference in the rejection of claim 1), wherein the viewer-defined parameters comprise:

a viewer defined event, wherein the viewer defined event occurs within a specified presentation and the viewer defined event describes an activity or action that takes place within the specified electronic presentation (see Column 3, Lines 20-25 for a preference being the Middle East and Bill Clinton, which defines a viewer defined event that identifies the action of Bill Clinton talking about the Middle East (see Column 3, Lines 20-26)).

a viewer defined preference, wherein the viewer defined preference is a specified value assigned to the viewer defined event that occurs within the specified electronic presentation, (see Column 3, Lines 28-32 for the viewer

Art Unit: 2421

further assigning a value to the search that specifies which channels should be included in the search, for example only search news channels (wherein the terms "news" is the value)) that indicates a priority of the viewer-defined event to the viewer (see again Column 3, Lines 28-32 for the value indicating a priority that the viewer prefers news and stock market channels), wherein the specified value is utilized to rank multiple viewer-defined preferences (see again Column 3, Lines 28-32 for the value being used to locate a clip and send an alert to a viewer that a preferred clip is available, thereby selecting only preferred clips on preferred channels over all available clips on all available channels, thereby ranking multiple viewer-defined preferences by specifying Middle East and Bill Clinton on news and stock market channels).

Menard also discloses means for evaluating a plurality of live electronic presentations using the viewer-defined parameters (see again Column 4, Lines 47-57 for search engine 21 being used to determine if a viewer-defined preference is satisfied), wherein evaluating comprises at least monitoring data that does not comprise content that can be presented to a viewer (see the rejection of claim 1) and wherein an activity or action can pertain to a character or person in at least one of said electronic presentations (see Column 3, Lines 20-25 for a preference being the Middle East and Bill Clinton, wherein the activity pertaining to a person is Bill Clinton talking about the Middle East).

Menard also discloses that in the event that one or more of the viewer-defined parameters is satisfied, notifying a viewer that is associated with the viewer-defined parameter was satisfied (see again Column 3, Lines 33-39 and the rejection of claim 11).

Referring to claim 26, Menard discloses that notifying comprises automatically displaying the electronic presentation that satisfied the viewer-defined parameter (see Column 3, Lines 38-39).

Referring to claim 27, see Column 3, Lines 33-39 in the rejection of claim 25.

Referring to claim 29, Menard also discloses that said receiving is performed by a server that is programmed to receive the viewer requests and notify the viewers (see Column 4, Lines 21-24 for setting up the viewer profile in memory 20 prior to sending the viewer profile request to search engine 21 and Column 3, Lines 33-39 for sending the notification to the viewer).

Referring to claim 30, see the rejection of claim 29 and further note that the server of Menard is further used to evaluate the live electronic presentations (see Column 4, Lines 47-57 for the notification of profile data being transmitted/sent from memory 20 to search engine 21 in Figure 3 and see again Column 4, Lines

Art Unit: 2421

47-57 for receiving a notification of profile data from memory 20 to search engine 21 in Figure 3).

Referring to claim 31, Menard discloses receiving information describing the electronic presentation as they are broadcast (see Column 4, Lines 12-13 for receiving the time-tagged text stream from LAN 14 previously described by the examiner in the rejections above), receiving updated information describing the electronic presentations as they are being broadcast (see Column 4, Lines 47-49 for the text stream continually being sent over LAN 14, thereby continually updating the text streams from the television program in order for a profile match from the profile data stored in memory 20 to occur) and evaluating all of the information that is received in light of the viewer-defined preferences (see again Column 4, Lines 47-57 for evaluating all of the incoming text-tagged data streams against the user's profiles stored in memory 20).

Referring to claims 32-33, see the rejection of claims 9-10, respectively.

Referring to claims 34-35, see the rejection of claim 25.

Referring to claim 36, see the rejection of claim 26.

Referring to claims 37 and 39-40, see the rejection of claim 2-3 and 9,

respectively.

Referring to claim 41, see the rejection of claim 1 and further note Figures 1-2 for the computing and client devices used in the system of Menard.

Referring to claim 42, see the rejection of claim 27.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 8, 18, 28 and 43 are rejected under 35 U.S.C. 103(a) as being unpatentable over Menard et al. (U.S. Patent No. 6,810,526) in view of Alexander et al. (U.S. Patent No. 6,177,931).

Referring to claim 8, Menard discloses all of the limitations of claim 1, but is silent as to the specific display of the detected television programs, thereby failing to teach that the automatic switching comprises enabling a PIP display for the viewer in which at least two of the electronic presentations are contemporaneously displayed for the viewer.

Alexander teaches a method for collecting viewer profile information at a central server similar to the method of Menard (see Column 29, Lines 12-67) and using the

Art Unit: 2421

profile information to display specific electronic presentations to the viewer (see

Column 31, Lines 25-33 or Column 32, Line 61 through Column 33, Line 8).

Alexander further teaches using the profile information/viewer-defined preferences to automatically switch using a PIP display for the viewer in which at least

two electronic presentations are contemporaneously displayed for the viewer (see

Column 31, Lines 9-24).

At the time the invention was made, it would have been obvious to a person of

ordinary skill in the art, to modify the television display, as taught by Menard, using the

PIP display functionality, as taught by Alexander, for the purpose of providing improved

features to the EPG display and navigation, improved opportunities for the commercial

advertiser to reach the viewer (see Column 2, Lines 5-15 of Alexander).

Referring to claim 18, see the rejection of claim 8.

Referring to claim 28, see the rejection of claim 8.

Referring to claim 43, see the rejection of claim 8 for displaying indicia containing

a live electronic presentation in the form of a PIP window displaying a television

program.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jason P. Salce whose telephone number is (571) 272-7301. The examiner can normally be reached on M-F 9am-6pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Miller can be reached on (571) 272-7353. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
